ஆரை தெகுதி  
இரண்டு மணித்தியாலம்  
*Two hours*

**Instructions:**

- \* Periodic Table is provided.
  - \* This paper consists of 09 pages.
  - \* Answer all the questions.
  - \* Use of calculators is not allowed.
  - \* Write your Index Number in the space provided in the answer sheet.
  - \* Follow the instructions given on the back of the answer sheet carefully.
  - \* In each of the questions 1 to 50, pick one of the alternatives from (1), (2), (3), (4), (5) which is correct or most appropriate and mark your response on the answer sheet with a cross (x) in accordance with the instructions given on the back of the answer sheet.

Universal gas constant  $R = 8.314 \text{ J K}^{-1} \text{ mol}^{-1}$

$$\text{Avogadro constant} \quad N_A = 6.022 \times 10^{23} \text{ mol}^{-1}$$

$$\text{Planck's constant} \quad h = 6.626 \times 10^{-34} \text{ Js}$$

$$\text{Velocity of light} \quad c = 3 \times 10^8 \text{ m s}^{-1}$$

1. Consider the following statements, I and II.

  - The energy absorbed or released by atoms is quantized.
  - Small particles under appropriate conditions show wave properties.

The two scientists who proposed the theories as given by statements I and II respectively are,

  - Louis de Broglie and Albert Einstein
  - Max Planck and Louis de Broglie
  - Max Planck and Ernest Rutherford
  - Niels Bohr and Louis de Broglie
  - Louis de Broglie and Max Planck

2. The maximum number of **electron pairs** of an atom that are associated with principal quantum number  $n = 3$  is,

  - 3
  - 4
  - 5
  - 8
  - 9

3. The number of stable resonance structures that can be drawn for the oxalate ion  $\left[ \text{C}_2\text{O}_4^{2-} / (\text{O}_2\text{C}-\text{CO}_2)^{2-} \right]$  is,

  - 2
  - 3
  - 4
  - 5
  - 6

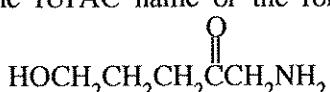

4. What is the IUPAC name of the following compound?

  
 $\text{HOCH}_2\text{CH}_2\text{CH}_2\overset{\text{O}}{\underset{\parallel}{\text{C}}}\text{NH}_2$

  - 5-hydroxy-2-oxo-1-pentanamine
  - 1-amino-5-hydroxy-2-oxopentane
  - 1-amino-5-hydroxy-2-pentanone
  - 5-hydroxy-1-amino-2-pentanone
  - 5-amino-4-oxo-1-pentanol

5. Identify the pair of elements which has the **largest** difference in electronegativities.

  - B and Al
  - Be and Al
  - B and Si
  - B and C
  - Al and C

5. Identify the pair of elements which has the **largest** difference in electronegativities.  
(1) B and Al    (2) Be and Al    (3) B and Si    (4) B and C    (5) Al and C

6. The electron pair geometry and shape around the two nitrogen atoms (labelled as N<sup>1</sup> and N<sup>2</sup>) in the H<sub>2</sub>NNO.

N <sup>1</sup>		N <sup>2</sup>	
(1) tetrahedral	pyramidal	trigonal planar	angular
(2) pyramidal	trigonal planar	trigonal planar	angular
(3) trigonal planar	pyramidal	trigonal planar	trigonal planar
(4) tetrahedral	pyramidal	angular	trigonal planar
(5) tetrahedral	angular	trigonal planar	trigonal planar

7. Which of the following statements is incorrect regarding benzene?

- (1) The resonance hybrid of benzene is depicted as follows:

- (2) All six carbon atoms of benzene are  $sp^2$  hybridized.
  - (3) The bond lengths between any two carbon atoms of benzene have the same value.
  - (4) All the C—C—C and the C—C—H bond angles of benzene have the same value.
  - (5) All the hydrogen atoms of benzene lie in the same plane.

8.  $\text{TiCl}_4(\text{g})$  reacts with liquid magnesium metal ( $\text{Mg}(\text{l})$ ) to give  $\text{Ti}(\text{s})$  metal and  $\text{MgCl}_2(\text{l})$  at high temperature. When 0.95 kg of  $\text{TiCl}_4(\text{g})$  is made to react with 97.2 g of  $\text{Mg}(\text{l})$ , the reactant that is completely consumed (this is commonly referred to as limiting reactant) and the amount of  $\text{Ti}(\text{s})$  metal formed respectively are, (Molar mass:  $\text{TiCl}_4 = 190 \text{ g mol}^{-1}$ ;  $\text{Mg} = 24.3 \text{ g mol}^{-1}$ ;  $\text{Ti} = 48 \text{ g mol}^{-1}$ )

- (1) TiCl<sub>4</sub> and 96 g                          (2) Mg and 96 g                          (3) Mg and 48 g  
 (4) TiCl<sub>4</sub> and 192 g                          (5) Mg and 192 g

- The decreasing order of conductivity of the following aqueous solutions including  $\text{H}_2\text{O}$  is, 0.01 M KCl, 0.1 M KCl, 0.1 M HAC; (HAC = acetic acid; M = mol  $\text{dm}^{-3}$ )

- (1)  $\text{H}_2\text{O}$  > 0.1 M HAC > 0.1 M KCl > 0.01 M KCl

- (2) 0.01 M KCl > 0.1 M HAC > 0.1 M KCl >  $\text{H}_2\text{O}$   
(3) 0.01 M KCl > 0.1 M KCl > 0.1 M HAC >  $\text{H}_2\text{O}$   
(4) 0.1 M KCl > 0.01 M KCl > 0.1 M HAC >  $\text{H}_2\text{O}$   
(5) 0.1 M HAC >  $\text{H}_2\text{O}$  > 0.01 M KCl > 0.1 M KCl

11. The correct answer when the chemical species  $\text{SO}_2$ ,  $\text{SO}_3$ ,  $\text{SO}_3^{2-}$ ,  $\text{SO}_4^{2-}$  and  $\text{SCl}_2$  are arranged in the **increasing** order of the electronegativity of sulphur (S) atom is,

- (1)  $\text{SCl}_2 < \text{SO}_3^{2-} < \text{SO}_2 < \text{SO}_3 < \text{SO}_4^{2-}$

(2)  $\text{SO}_3 < \text{SO}_4^{2-} < \text{SO}_2 < \text{SO}_3^{2-} < \text{SCl}_2$

(3)  $\text{SO}_3^{2-} < \text{SO}_4^{2-} < \text{SCl}_2 < \text{SO}_3 < \text{SO}_2$

(4)  $\text{SCl}_2 < \text{SO}_3^{2-} < \text{SO}_4^{2-} < \text{SO}_2 < \text{SO}_3$

(5)  $\text{SCl}_2 < \text{SO}_4^{2-} < \text{SO}_3^{2-} < \text{SO}_2 < \text{SO}_3$

12. Which of the following answers gives the maximum hydroxide concentration that can exist in a  $1.775 \text{ mol dm}^{-3}$  aqueous solution of  $\text{MgCl}_2$  at  $25^\circ\text{C}$ ? At this temperature, solubility product of  $\text{Mg(OH)}_2$  is  $7.1 \times 10^{-12} \text{ mol}^3 \text{ dm}^{-9}$ .
- (1)  $4.0 \times 10^{-6} \text{ mol dm}^{-3}$       (2)  $2.0 \times 10^{-6} \text{ mol dm}^{-3}$       (3)  $1.775 \times 10^{-12} \text{ mol dm}^{-3}$   
 (4)  $\sqrt{7.1} \times 10^{-6} \text{ mol dm}^{-3}$       (5)  $1.0 \times 10^{-6} \text{ mol dm}^{-3}$

13. What is the major product of the following reaction?

14. Identify the correct statement from the following.

- (1) The bond angle of  $\text{NF}_3$  is larger than the bond angle of  $\text{NH}_3$ .  
 (2) Elements in group 17 (or 7A) exhibit oxidation states from  $-1$  to  $+7$ .  
 (3) Monoclinic sulphur is the most stable allotrope of sulphur at room temperature.  
 (4) The density of graphite is higher than the density of diamond.  
 (5) Aluminium chloride satisfies the octet rule in the gaseous state.

15. The standard electromotive force of the electrochemical cell  $\text{Mn(s)} \parallel \text{Mn}^{2+}(\text{aq}) \parallel \text{Br}^-(\text{aq}) \parallel \text{Br}_2(\text{g}) \parallel \text{Pt(s)}$  is  $2.27 \text{ V}$ . The standard reduction potential of  $\text{Br}_2(\text{g}) \parallel \text{Br}^-(\text{aq})$  is  $1.09 \text{ V}$ . The standard reduction potential of  $\text{Mn}^{2+}(\text{aq}) \parallel \text{Mn(s)}$  is,

- (1)  $-3.36 \text{ V}$       (2)  $-1.18 \text{ V}$       (3)  $0.59 \text{ V}$       (4)  $1.18 \text{ V}$       (5)  $3.36 \text{ V}$

16. The enthalpy change of vaporization and the entropy change of vaporization of a liquid are,  $45.00 \text{ kJ mol}^{-1}$  and  $90.0 \text{ J K}^{-1} \text{ mol}^{-1}$  respectively. The boiling point of the liquid is,

- (1)  $45.0^\circ\text{C}$       (2)  $62.7^\circ\text{C}$       (3)  $100.0^\circ\text{C}$       (4)  $135.0^\circ\text{C}$       (5)  $227.0^\circ\text{C}$

17. What is the incorrect statement about  $\text{C}_6\text{H}_5\overset{+}{\text{N}}\equiv\text{NCl}^-$  ?

- (1)  $\text{C}_6\text{H}_5\overset{+}{\text{N}}\equiv\text{NCl}^-$  can be obtained by reacting aniline with  $\text{HNO}_2$  ( $\text{NaNO}_2/\text{HCl}$ ) at  $0 - 5^\circ\text{C}$ .  
 (2)  $\text{C}_6\text{H}_5\overset{+}{\text{N}}\equiv\text{NCl}^-$  reacts with KI to give iodobenzene.  
 (3) The  $\text{C}_6\text{H}_5\overset{+}{\text{N}}\equiv\text{N}$  ion can act as an electrophile.  
 (4) When an aqueous solution of  $\text{C}_6\text{H}_5\overset{+}{\text{N}}\equiv\text{NCl}^-$  is heated, it decomposes to give benzene.  
 (5)  $\text{C}_6\text{H}_5\overset{+}{\text{N}}\equiv\text{NCl}^-$  reacts with phenols in a basic medium to give coloured compounds.

18.  $\text{H}_2\text{S(g)}$  reacts with  $\text{O}_2(\text{g})$  to give only water vapour ( $\text{H}_2\text{O(g)}$ ) and  $\text{SO}_2(\text{g})$ , as products. When  $4 \text{ dm}^3$  of  $\text{H}_2\text{S(g)}$  reacts with  $10 \text{ dm}^3$  of  $\text{O}_2(\text{g})$  at a constant pressure and  $250^\circ\text{C}$ , the final volume of the mixture is,

- (1)  $6 \text{ dm}^3$       (2)  $8 \text{ dm}^3$       (3)  $10 \text{ dm}^3$       (4)  $12 \text{ dm}^3$       (5)  $14 \text{ dm}^3$

19. A mixture of A(g) and D(g) was introduced into a rigid evacuated container at the temperature  $T$ . At this temperature, both A(g) and D(g) decompose according to the elementary reactions given below.

The initial pressure of the container  $P$ , changed to  $2.7 P$  after the complete decomposition of both reactants. The initial rate of decomposition of A(g) at this temperature is, ( $R$  is the universal gas constant)

$$(1) \quad 1.7k_1\left(\frac{P}{RT}\right)$$

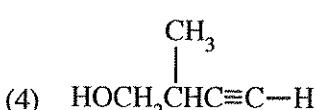

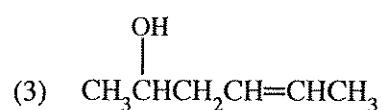

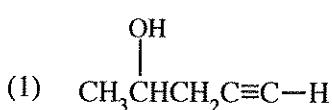

$$(2) \quad 2.7k_1\left(\frac{P}{RT}\right)$$

$$(3) \quad 0.09k_1\left(\frac{P}{RT}\right)^2$$

$$(4) \quad 2.89k_1\left(\frac{P}{RT}\right)^2$$

$$(5) \quad 7.29k_1\left(\frac{P}{RT}\right)^2$$

20. An organic compound (X) decolorizes bromine water ( $Br_2/H_2O$ ). X does not give a precipitate with ammoniacal CuCl. When X is treated with an acidic  $K_2Cr_2O_7$  solution, a green coloured solution is obtained. X could be:

21. A buffer solution of pH 5.0 was prepared by mixing equal volumes of a  $0.10 \text{ mol dm}^{-3}$  monobasic weak acid solution and a  $0.10 \text{ mol dm}^{-3}$  solution of the sodium salt of this acid. The pH of the resultant solution, when  $20.00 \text{ cm}^3$  of this buffer solution was mixed with  $90.00 \text{ cm}^3$  of  $0.10 \text{ mol dm}^{-3}$  weak acid solution, is,

(1) 3.0

(2) 4.0

(3) 4.5

(4) 5.5

(5) 6.0

22. Consider the following three aqueous solutions.

P - a weak acid,

Q - an equimolar mixture of the weak acid and its sodium salt,

R - titration mixture at the equivalence point of the titration of the weak acid and a strong base

When each solution is diluted by the same amount at constant temperature, the pH of P, Q and R respectively, will

(1) decrease, increase, not change. (2) increase, not change, decrease.

(3) increase, not change, not change. (4) increase, not change, increase.

(5) increase, increase, increase.

23. The incorrect statement with regard to the oxoacids of chlorine  $HOCl$ ,  $HClO_2$ ,  $HClO_3$  and  $HClO_4$  is,

(1) The shapes around chlorine in  $HClO_2$ ,  $HClO_3$  and  $HClO_4$  respectively are angular, pyramidal and tetrahedral.

(2) The oxidation states of chlorine in  $HOCl$ ,  $HClO_2$ ,  $HClO_3$  and  $HClO_4$  respectively are +1, +3, +5 and +7.

(3) The acid strength of the oxoacids varies as  $HOCl < HClO_2 < HClO_3 < HClO_4$ .

(4) All these oxoacids contain at least one double bond.

(5) All these oxoacids contain at least one OH group.

24. The density of an aqueous acidic solution at  $25^\circ C$  is  $1.0 \text{ kg dm}^{-3}$ . If the pH of this solution is 1.0, its  $H^+$  concentration in ppm would be,

(1) 0.1

(2) 1

(3) 100

(4) 1000

(5) 10,000

25. A 25.0 g sample of polluted air containing ozone ( $O_3$ ) is treated with an acidic solution containing excess KI. Ozone is converted to  $O_2$  and  $H_2O$  during this reaction. The iodine liberated is titrated with 0.002 mol  $dm^{-3}$   $Na_2S_2O_3$  solution. Volume of  $Na_2S_2O_3$  required was 25.0  $cm^3$ . The mass percent of  $O_3$  in the air sample is, ( $O = 16$ )

(1)  $4.8 \times 10^{-3}$     (2)  $6.4 \times 10^{-3}$     (3)  $9.6 \times 10^{-3}$     (4)  $1.0 \times 10^{-2}$     (5)  $3.2 \times 10^{-2}$

26. Which of the following reaction steps is not present in the Born-Haber cycle of  $NaCl(s)$  formation?

(1)  $Na^+(aq) + Cl^-(aq) \rightarrow NaCl(aq)$     (2)  $Na(s) \rightarrow Na(g)$     (3)  $Cl_2(g) \rightarrow 2Cl(g)$   
 (4)  $Cl(g) + e \rightarrow Cl^-(g)$     (5)  $Na^+(g) + Cl^-(g) \rightarrow NaCl(s)$

27. Activation energy of the elementary reaction  $A(g) + B(g) \rightarrow C(g)$  is  $E_a$ . This reaction is catalysed by the metal M. The energy diagram of the catalysed reaction is given below.

Which of the following is always correct with regard to this reaction?

(1)  $E_a < E_1$     (2)  $E_a = E_1 + E_2 + E_3 - \Delta H_1$     (3)  $E_a < E_1$ ,  $E_a < E_2$  and  $E_a < E_3$   
 (4)  $E_a > E_1 + E_2$     (5)  $E_a > \Delta H_1 + E_2$

28. For a weak acid, it can be given that  $F = \frac{\text{Amount of the acid dissociated}}{\text{Amount of the acid undissociated}}$

Which of the following graphs shows the relationship between Log F and pH?

29. Which of the following statements with regard to polymers is correct?

(1) Nylon is an addition polymer.  
 (2) Teflon is a condensation polymer.  
 (3) Bakelite is a linear polymer.  
 (4) The number of carbon atoms in the repeating unit of natural rubber is 4.  
 (5) Small covalent molecules are eliminated when monomers combine to form condensation polymers.

30. Two ideal gases that do not react with each other are separated by a valve and kept in a rigid container. This system is maintained at constant temperature and pressure. Which of the following correctly describes the change in Gibbs energy, enthalpy and entropy of the system respectively when the valve is opened?

(1) decreased, decreased, decreased    (2) decreased, decreased, increased  
 (3) decreased, unchanged, increased    (4) decreased, increased, increased  
 (5) increased, increased, increased

- For each of the questions 31 to 40, one or more responses out of the four responses (a), (b), (c) and (d) given is/are correct. Select the correct response/responses. In accordance with the instructions given on your answer sheet, mark
- if only (a) and (b) are correct.
  - if only (b) and (c) are correct.
  - if only (c) and (d) are correct.
  - if only (d) and (a) are correct.
  - if **any other** number or combination of responses is correct.

**Summary of above Instructions**

(1)	(2)	(3)	(4)	(5)
Only (a) and (b) are correct	Only (b) and (c) are correct	Only (c) and (d) are correct	Only (d) and (a) are correct	<b>Any other</b> number or combination of responses is correct

31. Which of the following statement/statements is/are correct with regard to simple covalent molecules containing oxygen and sulphur atoms?
- $\text{H}_2\text{O}$  shows amphoteric properties.
  - The boiling point of  $\text{H}_2\text{O}_2$  is higher than the boiling point of  $\text{H}_2\text{O}$ .
  - $\text{H}_2\text{O}_2$  can act as an oxidizing agent only in an acidic medium.
  - Both  $\text{H}_2\text{S}$  and  $\text{SO}_2$  have the capacity to act only as reducing agents.
32. Which of the following statement/statements is/are correct with regard to hydrocarbons?
- All hydrocarbons give  $\text{CO}_2$  and  $\text{H}_2\text{O}$  when completely reacted with excess  $\text{O}_2$ .
  - All alkynes react with Grignard reagents to give alkynylmagnesium halides.
  - The boiling point of a branched alkane is higher than the boiling point of an unbranched alkane with the same relative molecular mass.
  - None of the hydrocarbons react with aqueous  $\text{NaOH}$ .
33. If an endothermic reaction occurs spontaneously at constant temperature and pressure, then,
- enthalpy of the system decreases.      (b) entropy of the system increases.
  - enthalpy of the system increases.      (d) entropy of the system does not change.
34. Which of the following statement/statements is/are correct regarding the precipitation of metal ions by passing  $\text{H}_2\text{S(g)}$  in to their aqueous solutions?
- When the pressure of  $\text{H}_2\text{S(g)}$  is decreased, the sulphide ion concentration is increased.
  - When the temperature is increased, the sulphide ion concentration is decreased.
  - Addition of  $\text{Na}_2\text{S(s)}$  to the solution, decreases the dissociation of dissolved  $\text{H}_2\text{S(aq)}$ .
  - Increase in pH of the solution decreases sulphide ion concentration.
35. Which of the following is/are nucleophilic substitution reaction/reactions?
- $\text{CH}_3\overset{\text{O}}{\underset{\parallel}{\text{C}}}-\text{H} + \text{HCN} \longrightarrow \text{CH}_3\overset{\text{OH}}{\underset{\mid}{\text{C}}}\text{H}-\text{CN}$
  - $\text{CH}_3\text{CH}_2\text{OH} + \text{PCl}_3 \longrightarrow \text{CH}_3\text{CH}_2\text{Cl}$
  - $\text{CH}_3\overset{\text{CH}_3}{\underset{\mid}{\text{CH}}}\text{Cl} + \text{NaOH} \longrightarrow \text{CH}_3\overset{\text{CH}_3}{\underset{\mid}{\text{CH}}}\text{OH}$
  - $\text{CH}_3\overset{\text{CH}_3}{\underset{\mid}{\text{CH}}}\text{CH}_3 + \text{Cl}_2 \xrightarrow{\text{hv}} \text{CH}_3\overset{\text{Cl}}{\underset{\mid}{\text{C}}}\text{CH}_3$

36. Which of the following statement/statements is/are correct regarding the elevation of carbon dioxide level in the atmosphere?
- It contributes to the increase in acidity of sea water.
  - It reduces the hardness of water bodies.
  - It strongly absorbs UV radiation coming from the sun.
  - It does not contribute to acid rain.
37. Which of the following statement/statements is/are correct with regard to 3d-block elements?
- Zn has the highest first ionization energy among the 3d-block elements.
  - In contrast to the ions of most main group elements (*s* and *p*-block), 3d-block metal ions rarely attain the noble gas configuration.
  - Although the electronegativities of 3d-block elements are higher than the electronegativities of the corresponding *s*-block elements, their atomic radii are smaller than the atomic radii of the corresponding *s*-block elements.
  - The 3d-block elements that form colourless compounds are Ti and Zn.
38. Volatile liquids A and B having saturated vapour pressures  $P_A^\circ$  and  $P_B^\circ$  ( $P_A^\circ \neq P_B^\circ$ ) form an ideal solution. A mixture of the liquids A and B is in equilibrium with their vapour phase, in a closed container. When the volume of the container is increased and the equilibrium is re-established at the same temperature, which of the following statement/statements is/are correct?
- While some amount of A and B go to the gas phase, the composition of the liquid phase remains unchanged.
  - While some amount of A and B go to the gas phase, the composition of the gas phase remains unchanged.
  - While some amount of A and B go to the gas phase, the composition of the liquid phase changes.
  - While some amount of A and B go to the gas phase, the composition of the gas phase changes.
39. Which of the following statement/statements is/are correct regarding an aqueous solution of a weak acid?
- Conductivity of the solution increases as the concentration of the weak acid decreases.
  - Conductivity of the solution increases as the temperature increases.
  - Conductivity of the solution decreases but the fraction dissociated of the weak acid increases as more water is added to the solution.
  - When NaCl(s) is dissolved in the weak acid solution, conductivity decreases.
40. Which of the following statement/statements regarding compound A is/are correct?

- A exhibits geometric isomerism.
- A does not exhibit optical isomerism.
- The product obtained when A is reacted with pyridinium chlorochromate (PCC) exhibits optical isomerism.
- The product obtained when A is reacted with pyridinium chlorochromate does not exhibit geometric isomerism.

- In question Nos. 41 to 50, two statements are given in respect of each question. From the Table given below, select the response, out of the responses (1), (2), (3), (4) and (5), that best fits the two statements and mark appropriately on your answer sheet.

Response	First Statement	Second Statement
(1)	True	True, and correctly explains the first statement
(2)	True	True, but does not explain the first statement correctly
(3)	True	False
(4)	False	True
(5)	False	False

	First Statement	Second statement
41.	Among the halogens, I <sub>2</sub> is a solid whereas Br <sub>2</sub> is a liquid.	London forces become stronger with increase in molecular surface area.
42.	At a given pressure, the spontaneity of the reaction between N <sub>2</sub> and H <sub>2</sub> to give NH <sub>3</sub> drops with increasing temperature.	Entropy change of the reaction between N <sub>2</sub> and H <sub>2</sub> to give NH <sub>3</sub> is negative.
43.	Essential oils are generally extracted from plant materials by steam distillation.	Essential oils have a high solubility in water.
44.	A spontaneous reaction always has a negative Gibbs energy change no matter what the conditions are.	Gibbs energy change can be used to predict the direction of a reaction only under constant temperature and constant pressure conditions.
45.	Solubility of 1-butanol in water is less than the solubility of methanol in water.	The solubility of alcohols in water decreases as the size of the non-polar alkyl group increases relative to the polar OH group.
46.	The reaction, $\text{CH}_3-\text{CH}=\text{CH}_2 \xrightarrow{\text{HBr}} \text{CH}_3-\underset{\text{Br}}{\text{CH}}-\text{CH}_3$ is a nucleophilic addition reaction.	A secondary carbocation is formed as a reaction intermediate in the following reaction. $\text{CH}_3-\text{CH}=\text{CH}_2 \xrightarrow{\text{HBr}} \text{CH}_3-\underset{\text{Br}}{\text{CH}}-\text{CH}_3$
47.	Coke is used in several industrial processes.	Coke is only used industrially as a fuel.
48.	The carbonyl carbon atom of a ketone and the other atoms bonded to it lie in the same plane.	The carbonyl carbon atom of a ketone is sp <sup>2</sup> hybridized.
49.	Any two ideal gases have the same average kinetic energies at the same temperature.	At a given temperature, the average speed of gas molecules adjust according to their masses.
50.	Although CFC contribute to ozone layer depletion, the contribution from HFC is negligible.	HFC undergoes complete decomposition before reaching the upper atmosphere.

<b>Additional Reading Time</b>	<b>10 minutes</b>

**Use additional reading time** to go through the question paper, select the questions and decide on the questions that you give priority in answering.

- \* A Periodic Table is provided on page 16.
  - \* Use of calculators is not allowed.
  - \* Universal gas constant,  $R = 8.314 \text{ J K}^{-1} \text{ mol}^{-1}$
  - \* Avogadro constant,  $N_A = 6.022 \times 10^{23} \text{ mol}^{-1}$
  - \* In answering this paper, you may represent alkyl groups in a condensed manner.

**Index No. :** .....

**PART A — Structured Essay (pages 2 - 8)**

- \* Answer all the questions on the question paper itself.
  - \* Write your answer in the space provided for each question. Please note that the space provided is sufficient for the answer and that extensive answers are not expected.

**□ PART B and PART C – Essay (pages 9 - 15)**

- \* Answer four questions selecting two questions from each part. Use the papers supplied for this purpose.
  - \* At the end of the time allotted for this paper, tie the answers to the three Parts A, B and C together so that Part A is on top and hand them over to the Supervisor.
  - \* You are permitted to remove only Parts B and C of the question paper from the Examination Hall.

**PART A = STRUCTURED ESSAY**

**Answer all four questions on this paper itself. (Each question carries 100 marks.)**

Do not  
write  
in this  
column.

1. (a) The following questions are related to the elements of the second row in the Periodic Table. Write the **symbol** of the element in the space provided in answering parts (i) to (vi).

(i) Identify the element that has the highest electronegativity (disregard the noble gas). ....

(ii) Identify the element that has an allotrope which conducts electricity. ....

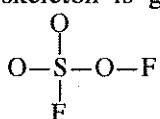

(iii) Identify the element that forms the monoatomic ion largest in size (this should be a stable ion). ....

(iv) Identify the element that has **no** *p* electrons but has a stable *s* configuration. ....

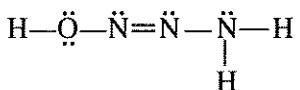

(v) Identify the element that has the highest first ionization energy. ....

(vi) Identify the element that forms mostly electron deficient trigonal planar covalent compounds. ....

(b) (i) Draw the most acceptable Lewis dot-dash structure for the molecule  $\text{SO}_3\text{F}_2$ . Its skeleton is given below.

(ii) The most stable Lewis dot-dash structure for the molecule  $\text{H}_3\text{N}_3\text{O}$  is shown below. Draw **two** more Lewis dot-dash structures (resonance structures) for this molecule. Write 'unstable' under the more unstable structure drawn by you.

(iii) Based on the Lewis dot-dash structure given below, state the following regarding the C, N and O atoms given in the table.

- |                                |  |
|--------------------------------|--|
| I. VSEPR pairs around the atom | II. electron pair geometry around the atom |
| III. shape around the atom     | IV. hybridization of the atom              |

The atoms are numbered as follows.

	O <sup>1</sup>	N <sup>2</sup>	C <sup>3</sup>	N <sup>4</sup>
I. VSEPR pairs				
II. electron pair geometry				
III. shape				
IV. hybridization				

Do not  
write  
in this  
column.

- (iv) Identify the atomic/hybrid orbitals involved in the formation of the following  $\sigma$  bonds in the Lewis dot-dash structure given in part (iii) above. (Numbering of atoms is as in part (iii).)

I.	$\text{F}-\text{O}^1$	$\text{F}$ .....	$\text{O}^1$ .....
II.	$\text{O}^1-\text{N}^2$	$\text{O}^1$ .....	$\text{N}^2$ .....
III.	$\text{N}^2-\text{C}^3$	$\text{N}^2$ .....	$\text{C}^3$ .....
IV.	$\text{C}^3-\text{N}^4$	$\text{C}^3$ .....	$\text{N}^4$ .....
V.	$\text{N}^4-\text{O}^5$	$\text{N}^4$ .....	$\text{O}^5$ .....
VI.	$\text{N}^4-\text{Cl}$	$\text{N}^4$ .....	$\text{Cl}$ .....

- (v) Identify the atomic orbitals involved in the formation of the following  $\pi$  bonds in the Lewis dot-dash structure given in part (iii) above. (Numbering of atoms is as in part (iii).)

I.	$\text{N}^2-\text{C}^3$	$\text{N}^2$ .....	$\text{C}^3$ .....
II.	$\text{C}^3-\text{N}^4$	$\text{C}^3$ .....	$\text{N}^4$ .....

- (vi) I. How are the two double bonds oriented in the Lewis dot-dash structure given in part (iii)?

.....

- II. Give an example of a molecule/ion that has a similar orientation of double bonds.

.....

Note: Your example should not contain more than 3 atoms.

The elements in your example should be restricted to the first and second periods of the Periodic Table.

(52 marks)

- (c) (i) An atomic orbital is described by three quantum numbers  $n$ ,  $l$  and  $m_l$ .

Write the appropriate quantum numbers and the name of the atomic orbital in the boxes given below.

	$n$	$l$	$m_l$	atomic orbital
I.	<input type="text"/>	<input type="text"/>	+1	$3p$
II.	3	2	-2	<input type="text"/>
III	<input type="text"/>	<input type="text"/>	<input type="text"/>	$2s$

- (ii) Arrange the following in the increasing order of the property indicated in parenthesis. (Reasons are not required.)

- I. LiF, LiI, KF (melting point)

..... < ..... < .....

- II.  $\text{NO}_2^-$ ,  $\text{NO}_4^{3-}$ ,  $\text{NF}_5$  (stability)

..... < ..... < .....

- III. NOCl,  $\text{NOCl}_3$ ,  $\text{NO}_2\text{F}$  (N—O bond distance)

..... < ..... < .....

(24 marks)

Do not  
write  
in this  
column.

2.(a) X is an s-block element in the Periodic Table. The first, second and third ionization energies of X, in  $\text{kJ mol}^{-1}$  are 738, 1451 and 7733 respectively. X reacts slowly with hot water, liberating  $\text{H}_2(\text{g})$  and forming its hydroxide. The hydroxide is basic. X also liberates  $\text{H}_2(\text{g})$  on reaction with dilute acids. X burns in air with a bright white light. The cation of X contributes to hardness of water.

- (i) Identify X.      X: .....
- (ii) Write the ground state electronic configuration of X. .....
- (iii) Write the chemical formulae of the two compounds formed when X burns in air.  
..... and .....

(iv) Consider the given compounds of the elements in the group in the Periodic Table to which X belongs. In the given boxes, write whether the indicated property **increases** or **decreases** down the group.

I. Solubility of sulphates in water

II. Solubility of hydroxides in water

III. Thermal stability of metal carbonates

Give reasons for your answer in III.

.....  
.....  
.....

(v) Identify the element in the s-block of the Periodic Table, which reacts in a similar manner to X with  $\text{H}_2(\text{g})$ ,  $\text{O}_2(\text{g})$  and  $\text{N}_2(\text{g})$ , but does **not** belong to the same group as X.

.....

(vi) Identify another **metal ion** that contributes to hardness of water.

.....

(vii) Identify the compound most commonly used to remove hardness of water.

.....

(viii) X is a component of a well-known reagent used in organic chemistry. Give the **name** of this reagent.

.....

**(50 marks)**

Do not  
write  
in this  
column.

- (b) Test tubes labelled A to E contain aqueous solutions of  $\text{Na}_2\text{S}_2\text{O}_3$ ,  $\text{Na}_2\text{CO}_3$ ,  $\text{KNO}_2$ ,  $\text{KBr}$  and  $\text{Na}_2\text{S}$  (not in order). The characteristics of the solutions obtained and gases evolved on addition of dil. HCl (warming if required) to each of the test-tubes A to E are given in the table below.

Test-tube	Appearance of solution	Gas
A	colourless	colourless and odourless
B	colourless	reddish-brown with a pungent odour
C	colourless	colourless with a rotten egg odour
D	turbid	colourless with a pungent odour
E	colourless	not evolved

- (i) Identify the solutions in each of the test-tubes A to E.

A : ..... C : ..... E : .....

B : ..... D : .....

- (ii) Write balanced chemical equations for the reactions that take place in test-tubes A, B, C and D.

In A : .....

In B : .....

In C : .....

In D : .....

- (iii) Write a chemical test to identify each of the gases evolved in A, C and D.

Note: Observations are also required.

In A : .....

.....

In C : .....

.....

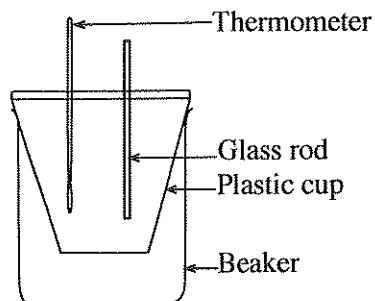

In D : .....

(50 marks)

3. The set up shown in the figure was used to calculate the heat change associated with the dissolution of MX(s) in water. 100.00 cm<sup>3</sup> of distilled water was added to the cup. The initial temperature of distilled water was measured to be 25.0 °C. Then 0.10 mol of MX(s) was added to the water and stirred continuously. It was observed that the temperature of the solution decreased gradually. The lowest temperature measured was 17.0 °C. The amount of water used was sufficient to completely dissolve MX(s). Density and specific heat capacity of water are 1.00 g cm<sup>-3</sup> and 4.20 J g<sup>-1</sup> °C<sup>-1</sup> respectively. Assume that the density and the specific heat capacity of water are not changed due to the dissolution of MX(s).

- (i) Calculate the amount of heat that should be supplied to bring the system (solution) back to 25.0 °C.

.....  
.....  
.....

Do not  
write  
in this  
column.

- (ii) Is the dissolution of MX(s) in water an endothermic or exothermic process? Explain your answer.

.....  
.....  
.....  
.....  
.....

- (iii) Calculate the enthalpy change (in  $\text{kJ mol}^{-1}$ ) associated with reaction

.....  
.....  
.....  
.....  
.....

- (iv) If this experiment was conducted using  $200.00 \text{ cm}^3$  of water, would you expect the temperature change to be larger than the above value? Explain your answer.

.....  
.....

- (v) Show the variation of temperature of the system (solution) by drawing the temperature – time curve.

**Note:** Eventually the system reaches the room temperature ( $25.0^\circ\text{C}$ ).

- (vi) In this experiment, explain why a plastic cup is used instead of a metal cup.

.....  
.....  
.....

- (vii) Gibbs energy change ( $\Delta G$ ) for the dissolution of MX(s) in water at the temperature of  $25.0^\circ\text{C}$  and pressure of  $1.0 \text{ atm}$  was calculated to be  $-26.0 \text{ kJ mol}^{-1}$ . Calculate the entropy change ( $\Delta S$ ) of dissolution of MX(s) in water at  $25.0^\circ\text{C}$  using the enthalpy change calculated above.

.....  
.....  
.....  
.....  
.....

- (viii) Would you expect the solubility of MX(s) to increase or decrease with increasing temperature? Give reasons for your answer.

.....  
.....  
.....

(100 marks)

[see page seven]

Do not  
write  
in this  
column.

4. (a) Compounds **A** and **B** both have the same molecular formula  $C_5H_{10}O$ . Both **A** and **B** give orange/red precipitates with 2,4-dinitrophenylhydrazine. When **A** and **B** are reacted separately with  $NaBH_4$  in methanol, compound **A** gives **C** and compound **B** gives **D**. When **C** is heated with  $Al_2O_3$ , two alkenes **E** ( $C_5H_{10}$ ) and **F** ( $C_5H_{10}$ ) are formed. When **E** and **F** are reacted separately with conc.  $H_2SO_4$  and the products obtained are hydrolysed, compound **E** gives **G**, while compound **F** gives **H**. **G** gives a turbidity immediately with the Lucas reagent. **H** also gives a turbidity with the Lucas reagent but not immediately.

- (i) Draw the structures of **G** and **H**.

**G**
**H**

- (ii) Draw the structures of **A**, **C**, **E** and **F**.

**A**
**C**
**E**
**F**

When heated with  $Al_2O_3$ , **D** gives alkene **I** ( $C_5H_{10}$ ). When **I** is reacted with conc.  $H_2SO_4$  and the product obtained hydrolysed, **G** is obtained.

- (iii) Draw the structures of **B**, **D** and **I**.

**B**
**D**
**I**

- (iv) Describe a test/reaction to distinguish between **A** and **B**.

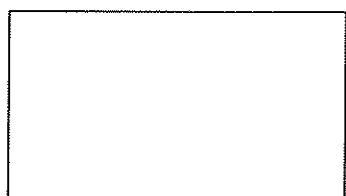

.....  
.....  
.....  
.....  
.....  
.....

(50 marks)

(b) (i) Give the structures of **J**, **K**, **L** and **M** in the following reaction sequences.

Do not write in this column.

**J****K****L****M**

(ii) Selecting from the list given below, write the type of reaction taking place in reactions **I**, **II** and **III**.

Nucleophilic Addition,    Nucleophilic Substitution,  
 Electrophilic Addition,    Electrophilic Substitution,    Elimination

Reaction I: .....

Reaction II: .....

Reaction III: .....

(iii) Using your knowledge of the mechanism of the reaction between alkenes and HBr, give the mechanism of reaction **III**.

(50 marks)

\* Universal gas constant  $R = 8.314 \text{ J K}^{-1} \text{ mol}^{-1}$

\* Avogadro constant  $N_A = 6.022 \times 10^{23} \text{ mol}^{-1}$

**PART B — ESSAY**

*Answer two questions only. (Each question carries 150 marks.)*

5. (a) A titration between the mono acidic weak base B ( $0.15 \text{ mol dm}^{-3}$ ) and HCl ( $0.10 \text{ mol dm}^{-3}$ ) was carried out using a suitable indicator as described below.

The HCl solution ( $25.00 \text{ cm}^3$ ) was kept in the titration flask and the weak base B was added using a burette. The dissociation constant,  $K_b$  of the weak base at  $25^\circ\text{C}$  is  $1.00 \times 10^{-5} \text{ mol dm}^{-3}$ . All the experiments were conducted at  $25^\circ\text{C}$ .

- Calculate the pH of the acid solution in the titration flask, before the addition of the base, B.
- Calculate the pH of the solution in the titration flask, after the addition of  $10.00 \text{ cm}^3$  of the solution of B. Can the solution in the titration flask act as a buffer solution? Explain your answer.
- Calculate the volume of the weak base solution required to reach the equivalence point.
- Another  $10.00 \text{ cm}^3$  volume of the weak base was added to the titration flask after reaching the equivalence point. Calculate the pH of the solution in the titration flask.
- Can the solution obtained in (iv) above act as a buffer solution? Explain your answer.
- Sketch the variation in pH of the mixture in the titration flask with the volume of the weak base solution added (titration curve). Label the axes, indicate pH on the y-axis and the volume of weak base solution added on the x-axis. Mark the equivalence point approximately. [Calculation of pH at equivalence point is not expected.] (75 marks)

- (b) The following two experiments were carried out at a constant temperature using the volatile liquids C and D which form an ideal solution.

**Experiment I:** The liquids C and D were introduced into an evacuated rigid container and allowed to reach equilibrium. When the system was at equilibrium, it was observed that the mole fractions of C and D in the liquid phase ( $L_I$ ) were 0.3 and 0.7 respectively. Total pressure in the container was  $2.70 \times 10^4 \text{ Pa}$ .

**Experiment II:** This experiment was conducted using different amounts of C and D. When the equilibrium was established, it was observed that the mole fractions of C and D in the liquid phase ( $L_{II}$ ) were 0.6 and 0.4 respectively. Total pressure of the container was  $2.40 \times 10^4 \text{ Pa}$ .

- Give the relationship between the partial pressure of C in the vapour phase ( $P_C$ ), its saturated vapour pressure ( $P_C^o$ ) and its mole fraction in the liquid phase ( $X_C$ ) in the form of an equation. This equation states a commonly used law in physical chemistry. Write the name of the law.
- Calculate the saturated vapour pressures of C and D.
- Calculate the mole fractions of C and D in the vapour phase ( $V_I$ ) of experiment I.
- Calculate the mole fractions of C and D in the vapour phase ( $V_{II}$ ) of experiment II.
- Show the compositions of liquid and vapour phases ( $L_I, L_{II}, V_I$  and  $V_{II}$ ) and relevant pressures in the above two experiments on a pressure-composition phase diagram drawn at constant temperature. (75 marks)

[see page ten]

6. (a) An organic solvent (org-1) and water(aq) are immiscible and form a biphasic system. Partition coefficient for the distribution of X between org-1 and water at temperature T is,  $K_D = \frac{[X]_{\text{org-1}}}{[X]_{\text{aq}}} = 4.0$

An amount of 0.50 mol of X was added to a system containing 100.00 cm<sup>3</sup> of org-1 and 100.00 cm<sup>3</sup> of water. The system was allowed to reach equilibrium at temperature T.

- Calculate the concentration of X in org-1.
- Calculate the concentration of X in water.

(20 marks)

- (b) The compound Y is soluble only in the aqueous phase. In the aqueous phase, X and Y react to form Z. The presence of Y and Z does not affect the distribution of X between org-1 and water.

A series of biphasic systems containing org-1 and water were prepared. Then different amounts of X were distributed in the biphasic systems and the systems were allowed to reach equilibrium. The initial rate of the reaction between X and Y in the aqueous phase was measured after adding Y into the aqueous phase of these biphasic systems. Results of these experiments conducted at temperature T are given in the table.

Experiment Number	Volume of water (cm <sup>3</sup> )	Volume of org-1 (cm <sup>3</sup> )	Total amount of X added (mol)	Total amount of Y added (mol)	Initial rate of the reaction (mol dm <sup>-3</sup> s <sup>-1</sup> )
1	100.00	100.00	0.05	0.02	$2.00 \times 10^{-6}$
2	100.00	100.00	0.10	0.04	$1.60 \times 10^{-5}$
3	50.00	50.00	0.25	0.02	$4.00 \times 10^{-4}$

Orders of the reaction with respect to X and Y are m and n respectively. The rate constant of the reaction at temperature T is k.

- Given that the concentrations of X and Y in the aqueous phase are [X]<sub>aq</sub> and [Y]<sub>aq</sub> respectively, write the rate expression for the reaction in terms of [X]<sub>aq</sub>, [Y]<sub>aq</sub>, m, n and k.
- Calculate the initial concentration of X in the aqueous phase in each experiment.
- Calculate the initial concentration of Y in the aqueous phase in each experiment.
- Calculate the orders m and n of the reaction with respect to X and Y respectively.
- Calculate the rate constant of the reaction.
- An experiment is designed to study the effect of temperature on the reaction rate using the partition coefficient given above.

Is this a suitable experiment to study the effect of temperature on the rate of the reaction? Explain your answer.

(105 marks)

- (c) The organic solvent org-2 and water are also immiscible and form a biphasic system. X (0.20 mol) was added to a system containing 100.00 cm<sup>3</sup> of org-2 and 100.00 cm<sup>3</sup> of water and allowed to reach equilibrium at the temperature T. Then Y (0.01 mol) was added to the aqueous phase and the initial rate of the reaction was measured. Y does not dissolve in org-2. The initial rate of the reaction between X and Y in the aqueous phase was found to be  $6.40 \times 10^{-7}$  mol dm<sup>-3</sup> s<sup>-1</sup>.

Calculate the partition coefficient  $\frac{[X]_{\text{org-2}}}{[X]_{\text{aq}}}$  for the distribution of X between org-2 and water.

[X]<sub>org-2</sub> is the concentration of X in the org-2 phase.

(25 marks)

7. (a) The setup shown in the figure was used to find the relative atomic mass of the metal,  $M$ .

The electrolysis was carried out for 10 minutes using a constant current. The mass of the cathode in cell A was increased by 31.75 mg whereas the mass of the cathode in cell B increased by 147.60 mg during this time period. (Assume that the electrolysis of water does not take place in cells A and B.)

- Identify the anode and cathode in each of the cells A and B (in terms of the numbers ①, ②, ③, and ④).
- Write the half reaction taking place at each electrode in each cell.
- Calculate the constant current used in electrolysis.
- Calculate the relative atomic mass of metal,  $M$ .

(75 marks)

- (b) (i) A, B and C are coordination compounds. They have an octahedral geometry. In each compound, **two types** of ligands are coordinated to the metal ion. The molecular formulae of the compounds are (not in order):  $\text{NiCl}_2\text{H}_{12}\text{N}_4$ ,  $\text{NiI}_2\text{H}_{16}\text{N}_4\text{O}_2$  and  $\text{NiCl}_2\text{H}_{15}\text{N}_3\text{O}_3$ .

Given below are the observations when aqueous solutions of the compounds are treated with  $\text{Pb}(\text{CH}_3\text{COO})_2(\text{aq})$ .

Compound	$\text{Pb}(\text{CH}_3\text{COO})_2(\text{aq})$
A	A white precipitate that is soluble in hot water
B	No precipitate
C	A yellow precipitate that is soluble in hot water

- Give the structures of A, B and C.
  - Write the chemical formulae of the precipitates formed on treatment of the compounds with  $\text{Pb}(\text{CH}_3\text{COO})_2(\text{aq})$ .  
(Note: Indicate compound and reagent)
  - State a chemical test, together with the observation, to identify each of the anion/s if present, that is/are not coordinated to the metal ion in the compounds given above.  
(Note: The tests given by you should not be a test stated here.)
- (ii) A transition metal  $M$  forms a coloured complex ion  $P$  in aqueous medium. It has the general formula  $[\text{M}(\text{H}_2\text{O})_n]^{m+}$ . It undergoes the reactions given below.

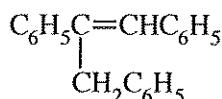

- Identify the metal  $M$ . Give the oxidation state of  $M$  in complex ion  $P$ .
- Give the electronic configuration of  $M$  in the complex ion  $P$ .
- Give the values of  $n$  and  $m$ .
- Give the geometry of  $P$ .
- Give the structures of Q, R and S.
- Give the IUPAC names of the complex ions, P, R and S.

(75 marks)

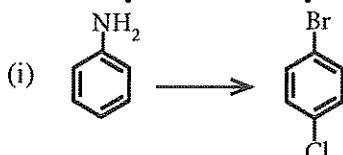

**PART C — ESSAY***Answer two questions only. (Each question carries 150 marks.)*

8. (a) Using  $C_6H_5CO_2CH_3$  as the only organic starting material and as reagents only those given in the list, show how you would synthesize the following compound in **not more than seven** (7) steps.

**List of reagents**PCl<sub>3</sub>, Mg/dry ether, H<sup>+</sup>/H<sub>2</sub>O, LiAlH<sub>4</sub>, conc. H<sub>2</sub>SO<sub>4</sub>

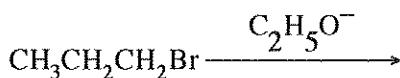

(60 marks)

- (b) Show how you would carry out each of the following conversions in **not more than three** (3) steps.

(60 marks)

- (c) The following reaction gives two products.

(i) Write the structures of the two products.

(ii) Write the mechanisms for the formation of these two products.

(30 marks)

9. (a) Solution X contains **four** metal cations. The following tests were carried out to identify these cations.

	Test	Observation
①	Dilute HCl was added to a small portion of X.	No precipitate.
②	H <sub>2</sub> S was bubbled through the solution from ① above.	A black precipitate (P <sub>1</sub> )
③	P <sub>1</sub> was separated by filtration. The filtrate was boiled to remove the H <sub>2</sub> S, cooled, and NH <sub>4</sub> Cl/NH <sub>4</sub> OH was added.	A green precipitate (P <sub>2</sub> )
④	P <sub>2</sub> was separated by filtration and H <sub>2</sub> S was bubbled through the filtrate.	A white precipitate (P <sub>3</sub> )
⑤	P <sub>3</sub> was separated by filtration. The filtrate was boiled to remove the H <sub>2</sub> S, cooled, and (NH <sub>4</sub> ) <sub>2</sub> CO <sub>3</sub> was added.	A white precipitate (P <sub>4</sub> )

The following tests were carried out on precipitates P<sub>1</sub>, P<sub>2</sub>, P<sub>3</sub> and P<sub>4</sub>.

Precipitate	Test	Observation
P <sub>1</sub>	P <sub>1</sub> was dissolved in hot dil. HNO <sub>3</sub> and conc. NH <sub>4</sub> OH was added in excess.	A deep blue coloured solution (solution 1)
P <sub>2</sub>	* Excess dil. NaOH was added to P <sub>2</sub> followed by H <sub>2</sub> O <sub>2</sub> . * Dilute H <sub>2</sub> SO <sub>4</sub> was added to solution 2.	A yellow coloured solution (solution 2)  An orange coloured solution (solution 3)
P <sub>3</sub>	* P <sub>3</sub> was dissolved in dil. HCl and dil. NaOH was added gradually. * Addition of dil. NaOH was continued.	A white precipitate (P <sub>5</sub> )  P <sub>5</sub> dissolved to give a colourless solution (solution 4)
P <sub>4</sub>	P <sub>4</sub> was dissolved in conc. HCl and subjected to the flame test.	A brick-red flame

- (i) Identify the **four** metal cations in solution X (Reasons are not required.)  
 (ii) Identify the precipitates  $P_1$ ,  $P_2$ ,  $P_3$ ,  $P_4$  and  $P_5$  and the chemical species responsible for the colours of solutions 1, 2, 3 and 4.  
 (Note: Write chemical formulae only.)

(75 marks)

- (b) The water sample Y contains the anions  $\text{SO}_3^{2-}$ ,  $\text{SO}_4^{2-}$  and  $\text{NO}_3^-$ . The following procedures were carried out for the quantitative analysis of the anions present in the water sample.

**Procedure 1**

To  $25.00 \text{ cm}^3$  of sample Y, an excess of a dilute solution of  $\text{BaCl}_2$  was added with stirring. Thereafter, excess dilute HCl was added with stirring to the precipitate formed until there was no further evolution of a gas with pungent odour. The solution was allowed to stand for 10 minutes and filtered. The precipitate was washed with distilled water and dried in an oven at  $105^\circ\text{C}$  until a constant mass was obtained. The mass of the precipitate was 0.174 g. The filtrate obtained was kept for further analysis (see procedure 3).

**Procedure 2**

To  $25.00 \text{ cm}^3$  of sample Y, an excess of dilute  $\text{H}_2\text{SO}_4$  and acidified 5%  $\text{KIO}_3$  solutions were added. The liberated  $\text{I}_2$  was immediately titrated with  $0.020 \text{ mol dm}^{-3}$   $\text{Na}_2\text{S}_2\text{O}_3$  solution using starch as the indicator. The volume of  $\text{Na}_2\text{S}_2\text{O}_3$  used was  $20.00 \text{ cm}^3$ . (Assume that in this procedure,  $\text{SO}_3^{2-}$  ions are oxidized to sulphate ions ( $\text{SO}_4^{2-}$ ) without any loss to the atmosphere.)

**Procedure 3**

The filtrate from procedure 1 was neutralized with dilute NaOH and to it excess Al powder and dilute NaOH were added. The solution was heated and the gas evolved was transferred quantitatively to react with a  $20.00 \text{ cm}^3$  volume of  $0.11 \text{ mol dm}^{-3}$  HCl solution. Completion of the reaction was tested with litmus. The HCl remaining after reacting with the gas evolved was titrated with  $0.10 \text{ mol dm}^{-3}$  NaOH solution using methyl orange as the indicator. The volume of NaOH required was  $10.00 \text{ cm}^3$ .

- (i) Write balanced ionic/non-ionic equations for the reactions taking place in procedures 1, 2 and 3.  
 (ii) Determine the concentrations ( $\text{mol dm}^{-3}$ ) of  $\text{SO}_3^{2-}$ ,  $\text{SO}_4^{2-}$  and  $\text{NO}_3^-$  in water sample Y.  
 (Ba = 137; S = 32; O = 16)  
 (iii) Give colour changes that would be observed in the titrations in procedures 2 and 3.

(Note: Assume that other ions that may interfere with the analysis are not present in sample Y.)

10.(a)

The flow chart given above indicates the production of metal magnesium (Mg) using the Dow Process.

Answer the following questions based on the flow chart.

- Identify the starting material A.
- Identify the processes employed at **B**, **C**, **D**, **E**, **F** and **G** from the list below.  
evaporation, dissolution, thermal decomposition, electrolysis, recycling of a reagent, precipitation
- Identify the chemical compound used in **B**.
- Identify the chemical species **P**, **Q**, **R** and **T**.
- Give balanced chemical equations/half reactions for the processes taking place in **B**, **C**, **D**, and **F**.  
(Note: When writing half reactions, identify the anode and cathode where applicable.)
- State the importance of the reaction occurring in **G**.

(50 marks)

- (b) (i) Consider the industries given below.

Coal power plants  
Refrigeration and air conditioning  
Transport  
Agriculture  
Animal farming

- All five industries given above contribute to global warming. Identify the gaseous chemical species associated with each of these industries that contribute to global warming.
  - State **three** adverse climate changes that could occur due to global warming.
- (ii) Identify the main industry/industries given in (i) above that contribute to
- photochemical smog,
  - acid rain,
  - eutrophication.

- (iii) Due to the reduction in rainfall in Sri Lanka, inducing artificial rain has been tested near catchment areas of reservoirs that are used for hydro-power generation. In this process, fine particles of hygroscopic salts ( $\text{NaCl}$ ,  $\text{CaCl}_2$ ,  $\text{NaBr}$ ) are sprayed to induce cloud formation by condensation of water vapour.

From the list given below, select the water quality parameters that are directly

- I. affected
- II. unaffected

due to salts entering water around catchment areas. Give reasons for your choice briefly.

List of water quality parameters:

pH, conductivity, turbidity, dissolved oxygen

(50 marks)

(c) The following questions are based on biodiesel production.

- (i) State the raw materials used in the manufacture of biodiesel.
- (ii) Name the main chemical compound present in each raw material where applicable.
- (iii) State the name of the chemical compound used as the catalyst in the manufacture of biodiesel in the school laboratory.
- (iv) Give a balanced chemical equation to show the synthesis of biodiesel using the chemical compounds stated in part (ii) above.
- (v) Identify a side reaction that would take place, along with its products, if the catalyst is used in excess.
